Visualization Development

Project Title	Visualization Development
Project Summary	Are you ready to use your business intelligence skills to analyze and present data with visualization tools? You will work with the up and coming Data Analytics team to transform data into dashboards that not only look cool, but also allow the user to easily understand and interact with the data.
Country	United States

Project Description

Looking for an innovative, visual thinker to assist in developing the way we interact and tell stories with data. Use Tableau to create dashboards that draw and keep the attention of stakeholders, drive engagement and foster understanding of even the most complex data sets. Share knowledge of creative ways to visualize data, apply best practices for manipulating data and create analyzable datasets. Work independently and with program leads to create visualizations, develop training and present best practices for dashboards and other visualizations. Must have access to Tableau 2019.x and Office 365 (mainly Excel).

Required Skills or Interests

Skill(s)
Data analysis
Data visualization
Editing and proofreading

Additional Information

The ideal candidate will have experience with business intelligence platforms, data analytics and data visualization tools, specifically Tableau. Please submit portfolio with work product - include at least two interactive visualizations using more than one data source.

Language Requirements

None
